Seminars in Systems Immunology

Dr. Luis Melo

**Centre of Biological Engineering, University of Minho,
Portugal**

**"Phage-bacteria *in vitro* interactions at
different infection conditions"**

Highlight of the presentation:

Due to the concerning impact of multidrug-resistant infections, the interest of phage therapy have re-emerged on the last decades. To be closer to a practical implementation, there are still some issues regarding phage therapy that need to be better understood. The limitations and challenges on the use of phage therapy to treat biofilm-associated infections will be discussed.

The talk will take place in the
lecture hall of the Institute of
Systems Immunology.
